

Power Fluids PF-7™ Gas System Cleaner is engineered to drastically reduce poor engine performance due to a dirty inefficient fuel system. **PF-7™** controls water and inhibits corrosion, while increasing fuel economy. It is engineered to reduce the effects of ethanol and only needs to be added to gasoline engines every 7,000 miles (highway driving) or 4,000 miles in severe driving conditions (city driving) resulting in improved mileage and great savings.

Power Fluids PF-7™ contains detergents designed to eliminate deposits and deliver fuel system cleanliness in the fuel tank, carburetor, fuel injectors, intake valves, and combustion chamber. It will clean and maintain a clean fuel system, increasing engine performance, throttle response, acceleration, and economy. Its formula contains cleaning agents so powerful that they are registered with the EPA as a detergent component for gasoline at the refinery level and also contains a unique lubricant to help reduce piston ring and valve wear.

Power Fluids PF-7™ is engineered to reduce exhaust emissions while cleaning away accumulated carbons, sticky gums, resin, tar and varnish deposits that hinder the efficiency of the engine and fuel system. The powerful detergent package reduces octane requirement by cleaning and removing hot carbon deposits that cause detonation and engine run-on. It also removes trace amounts of water condensation which causes rust, corrosion, and poor combustion.

This unique formulation is designed to improve the ability of gasoline to meet today's engine needs for a properly atomized fuel spray in fuel injected engines. Used in conjunction with **Power Fluids Gas Treatment** and **PF-1™**, your vehicle's engine will perform at peak level while generating a significant savings every time you go to the pump.

BENEFITS

- Improves fuel economy and performance by cleaning fuel system
- Improves horsepower and torque
- Reduces harmful exhaust emissions
- Removes trace amounts of water condensation, preventing rust and corrosion
- Removes accumulated carbons, gums, tar, varnish and resin deposits

USAGE DIRECTIONS

Apply one 8-ounce bottle of **Power Fluids PF-7™** cleaner to 16-20 gallons of gas every 4,000 city or 7,000 highway miles.
