

Power Fluids PF Gas Treatment™ is engineered to reduce the harmful effects of ethanol in your gasoline. **PF Gas Treatment™** has superior cleaning properties, to improve your car engine's operating efficiency. **Power Fluids PF Gas Treatment™** is used in cars, pickups and all gasoline powered equipment such as generators.

Power Fluids PF Gas Treatment™ cleans every part of the fuel system. In the carburetor or injection system, it quickly and effectively loosens and dissolves gums and carbon left by the fuel, and evacuates them through the exhaust system. In the fuel tank and fuel line, it removes harmful substances and corrosion deposits from condensation, oxidation and evaporation and keeps them out.

Power Fluids PF Gas Treatment™ helps keep your gas fresh during periods of non-use.

Power Fluids PF Gas Treatment™ has advanced water removal technology that helps eliminate water from your gasoline, increasing engine efficiency, mileage and reducing operating difficulties. It has an atomizer that helps improve combustion allowing your gasoline to burn more uniformly and completely.

Power Fluids PF Gas Treatment™ is the **only** gasoline treatment in the world that provides lubrication to upper cylinder walls, ring lands and even your exhaust valves and stems. This superior lubrication given by our **PF-1™** metal conditioner provides protection and increased performance with less friction and wear. This also means no dry starts or cold starts, even for engines that may set unused for long periods of time.

PF Gas Treatment™ is easy to use. Only one ounce of **PF Gas Treatment™** added to 10 gallons of gasoline increases octane, improving ignition and combustion, resulting in additional horsepower that gives your engine greater efficiency with smoother more economical performance.

Only **Power Fluids PF Gas Treatment™** gives your vehicles all these benefits:

BENEFITS:

- **Engineered to counter act the effects of ethanol**
- **Raises octane level of fuel, helping to increase horsepower and performance**
- **Dissolves dangerous deposits formed on injector nozzles**
- **Cleans carburetors of harmful deposits**
- **Advanced water removal technology helps eliminate water in fuel tank and system**
- **Controls corrosion and helps neutralize damaging acids formed in engines**
- **Reduces emissions**
- **Acts as an anti-icing agent**
- **Provides unmatched lubrication for upper cylinder walls, ring lands and exhaust valves and stems.**
- **Helps fuel burn more uniformly and completely, saving you money!**

USAGE DIRECTIONS

Add one ounce (1oz) of **PF Gas Treatment™** to every 10 gallons of Gasoline Add four ounces (4oz) to 10 gallons for winter storage.

Cannot over treat
