

Power Fluids Marine Gas Conditioner™ is engineered to reduce the harmful effects of ethanol in your gasoline. **Marine Gas Conditioner™** has superior cleaning properties, to improve your boat engine's operating efficiency. **Power Fluids Marine Gas Conditioner™** is used in boats, personal watercraft and all gasoline powered marine equipment such as generators.

Power Fluids Marine Gas Conditioner™ cleans every part of the fuel system. In the carburetor or injection system, it quickly and effectively loosens and dissolves gums and carbon left by the fuel, and evacuates them through the exhaust system. In the fuel tank and fuel line, it removes harmful

substances deposited from condensation, oxidation and evaporation. **Power Fluids Marine Gas Conditioner™** helps keep your gas fresh during periods of non-use.

Power Fluids Marine Gas Conditioner™ has advanced water removal technology that helps eliminate water from your gasoline, increasing engine efficiency, mileage and reducing operating difficulties. It has an atomizer that helps improve combustion allowing your gasoline to burn more uniformly and completely.

Power Fluids Marine Gas Conditioner™ is the **only** gasoline conditioner in the world that provides lubrication to upper cylinder walls, ring lands and even your exhaust valves and stems. This means no dry starts or cold starts, even for engines that may set unused for long periods of time.

Power Fluids Marine Gas Conditioner™ is easy to use. Only one ounce of **Marine Gas Conditioner™** added to 10 gallons of gasoline gives you the benefit of increased octane, improved ignition and combustion, resulting in additional horsepower that gives your engine greater efficiency with smoother more economical performance.

Only **Power Fluids Marine Gas Conditioner™** gives your equipment all these benefits:

BENEFITS

- Engineered to counter act the effects of ethanol
- Raises octane level of fuel, helping to increase horsepower and performance
- Dissolves dangerous deposits formed on injector nozzles
- Cleans carburetors of harmful deposits
- Advanced water removal technology helps eliminate water in fuel tank and system
- Controls corrosion and helps neutralize damaging acids formed in engines
- Reduces emissions
- Acts as an anti-icing agent
- Provides unmatched lubrication for upper cylinder walls, ring lands and exhaust valves and stems.
- Helps fuel burn more uniformly and completely, saving you money!

USAGE DIRECTIONS

Add one ounce (1oz) of **Marine Gas Conditioner™** to every 10 gallons of Gasoline Add four ounces (4oz) to 10 gallons for winter storage.
